DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Also, all rectangular boxes in Fig. 1 should be labeled. See 37 CFR 1.839(b). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2831

The claims include recitations with the disjunctive “or” for limitations that are clearly not equivalent under the specification. The metes and bounds of the claims as a whole cannot be ascertained.

Claim Rejections - 35 USC § 103

5. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Westphal P.N. 6,501,275.

Westphal discloses a gradient coil system for a Magnetic Resonance Imaging apparatus. Applicants attention is directed to Fig. 1 and corresponding description. Within a main magnet 12 (shown in Fig. 3) is arranged a gradient coil system having a gradient coil 2b and a gradient coil shield 3b. An eddy current shield system 5 is arranged between the main magnet coil 12 and the gradient coil system. The only difference between the prior art described above and the claims at issue, is the recited “mechanically decoupled “relationship between the main magnet and the eddy current shield. To mechanically decouple the two elements would have been obvious to the artisan of ordinary skill in the art in view of the teaching of Westphal found at lines 43-48 of col. 7.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Edelstein, Roozen and Punchard all disclose gradient coil systems for MRI devices. Note the abstract of each disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Louis M. Arana whose telephone number is (571) 272-2236. The examiner can normally be reached on M-Thurs. Fridays Off.
